# List Of Projects To Be Done

## Note : This projects ideas should not be shared with any group member apart from ours for now

- Job interview practice app. List of various career jobs will be on the platform with some job interview tricks.

  **Description of the project idea:**

  This platform ill help those that are preparing to go in for any job to build in more confidence in their selves and have some practical session even before going in for the interview.

  Ho it works: I log in to the system choose my career field in which I want to take the interview in. some short videos explaining hat is required of you I other to be able to have a good interview session and a part for you to grow your public speaking skills
- Campus maintenance request system.

  This will help provide income for some of these carpenters and technical workers hence reducing unemployment. Various campuses will be in partnership with system and technicians too will be part of the system so you are login in as either a technician or a school.

**Ho it works:**

The platform will comprise of two groups of people the various institutes that requires maintenance such as labs, houses schools etc. so if you are a technician you can log into the system and find out here you can get a job and it ill be easy. A section for ordering of school's equipment's will be part of the platform those that have school materials to sell, materials for maintenance and so on.

- An Agro (agriculture and farming skills) platform that teaches the basic farming techniques and some practical ways of farming in the various regions of the country in other to increase productivity. It will also contains some basic videos and tutorials ill some courses to betaken at an amount by any individual needed.

  **How it will work:** I can come to the system as a local farmer on the home page we have some brief listing of the various farming methods and a background video or image of the farming techniques' some courses to give then and tutorial sessions.
